Abstract (en)

[origin: EP3926090A1] A garment care device comprises a housing (30) and a steam generator (32) arranged in the housing for generating steam. The steam generator has a steam chamber (45) and a first cover (40) for closing the steam chamber (45). There is additionally a second cover (90; 140) arranged over the first cover (40), so as to create an enclosed compartment (120) between the first cover and the second cover. Thus, any steam leakage is contained.
