Abstract (en)

[origin: WO2021254564A1] The invention relates to a method for scanning object carriers using at least two object carrier scanners, comprising the steps a) loading a feed unit for object carriers with a plurality of object carriers, each of which is part of one of a plurality of sample series, b) transferring one object carrier from the feed unit to every object carrier scanner not loaded with an object carrier, c) carrying out a scanning process for each loaded object carrier scanner, d) transferring each scanned object carrier from the object carrier scanner to a buffer, e) providing a data set for every scanning process for analysis, f) transferring all object carriers of a sample series from the buffer to a final position.
