Abstract (en)

[origin: WO2021254608A1] The invention relates to a base (100), more particularly a relay base, comprising more particularly a mounting region (180) for detachably mounting the base (100) on a top-hat rail (500); a receptacle for an electric and/or electronic component (200), more particularly a relay or a contactor, wherein the base (100) comprises at least two electronic connections (110, 111) for the electric and/or electronic component (200), and wherein the base (100) comprises at least two terminal contacts (102, 103), connected to one of the electronic connections each. The base (100) further comprises a detection device (130) for detecting a first value of a parameter of the electric and/or electronic component (200). The invention further relates to a method for determining a parameter of an electric and/or electronic component (200) on a base (100), in which method a first value of the parameter is detected by a detection device (130) in the base (100).
