Abstract (en)

[origin: WO2021254821A1] A plug connector (1) comprises a contact carrier (2) and a plurality of contact elements (3) which are mounted in the contact carrier (2) and extend along a centre axis (M), wherein the contact carrier (2) has a front wall (4) and a rear wall (5) which are connected to one another via side walls (6), wherein the front wall (4), the rear wall (5) and the side walls (6) define a receiving space (7), wherein holding webs (8) extend through the receiving space (7) from the front wall (4) to the rear wall (5), which holding webs (8) each have a front fastening section (9) and a rear fastening section (10) as well as a clamping section (11) which is situated between the fastening sections (9, 10), wherein the holding webs (8) have at least one clamping structure (12) in the clamping section (11), in each case one contact element (3) being clamped in an intermediate space (14) between two adjacent holding webs (8) by way of said at least one clamping structure, and wherein at least one of the fastening sections (9, 10) has the structure of a solid joint (15) in such a way that the holding web (8) can be moved from a clamping position to a release position by elastic deformation of the solid joint (15) during insertion and/or removal of the contact element (3).
