Abstract (en)

This application discloses an aerosol generation apparatus and an electronic aerosol inhaler. The aerosol generation apparatus provides at least one implementation. The apparatus includes a shell, and a first liquid holder, a second liquid holder, and a vaporization element located in the shell. The shell extends in an axial direction and has a substrate cavity for accommodating a liquid substrate, the first liquid holder includes a body and a support portion extending from the body into the substrate cavity, the second liquid holder fits with the support portion of the first liquid holder to define a vaporization cavity, the vaporization element is held by the support portion, and an airflow buffer cavity located upstream of the vaporization cavity is formed in the body of the first liquid holder. The aerosol generation apparatus in this implementation enhances desired inhalation experience for the user by improving an airflow path design in the apparatus.
