Abstract (en)

[origin: EP4170268A1] The present invention relates to a cooling device (1) comprising a fresh food compartment (2); a freezing compartment (3), a partition (4) which separates the freezing compartment (3) from the fresh food compartment (2); an evaporator (5) which is disposed behind the freezing compartment (3); an air guiding member (6) which is placed onto the partition (4) surface adjacent to the freezing compartment (3) so as to form the base of the freezing compartment (3) and which guides the air leaving the evaporator (5) towards the front side of the freezing compartment (3); one or more than one locking housing (7) arranged on the partition (4) surface adjacent to the freezing compartment (3) so as to protrude into the partition (4); and one or more than one locking member (8) fixed to the locking housing (7) in both vertical and horizontal axes.
