Abstract (en)

[origin: WO2022005926A1] The invention provides pharmaceutical compositions that contain modified release formulations of modified forms of trimetazidine, such as CV-8972. The compositions include an erodible polymer, such as hydroxypropyl methylcellulose (HPMC), that allows sustained release of the modified form of trimetazidine and its metabolic products in the body. The invention also provides methods of treating conditions, including angina and heart failure, using such compositions.
