Abstract (en)
[origin: WO2021260218A1] The invention relates to an operating device and to a method for operating an operating device. The operating device comprises an operating unit which has a rotary part with a contact surface for rotating the operating unit and a rotatably accommodated rotor unit and a sensor unit. The sensor unit is suitable for determining a rotational movement of the operating unit. The operating unit comprises a coupling device which is suitable for and designed to ensure an at least partial rotatability of the rotary part relative to the rotor unit.
