Abstract (en)

[origin: WO2022013270A1] The device, in particular battery (2) comprises two parts, in particular at least one sensor (18) and in particular a battery management system (20) which are interconnected by a set of cables (14) for data transfer, the set of cables (14) only comprising enameled wires (16). The use of enameled wires (16) instead of conventional bunch conductors (26) used so far results in a reduction in material and costs and saves space.
