Abstract (en)
[origin: WO2021260288A1] The invention relates to a method for managing a home gateway (10) of a local area communication network. The gateway comprises a plurality of components, called sensitive components (MEM, PROC, BUS, CLINT, CLOC, SWEB, DOMOS). The network comprises at least one communicating object (14, 15, 16) able to be connected to said network via the gateway. The method comprises: - a step of acquiring (E22) at least one security rule (RULE) relating to at least one interaction of the object with at least one of said components of the gateway; - an observation step (E27) involving observing at least one interaction of said communicating object with at least one of said components of said gateway; - a step of deciding (E28), on the basis of said observation, on an action on said connected object.
