Abstract (en)
[origin: WO2021262234A1] Systems and methods for automatic display of recommended media content segments are disclosed. A current segment of a media content is displayed on a display screen. Subsequent segments of the media content are identified in a remaining runtime of the media content based on preferences of a profile. Simultaneously with displaying the current segment on the display screen, identifiers that identify the subsequent segments are displayed in a sequential order, respectively, on the display screen. At the conclusion of the current segment, the subsequent segments are automatically displayed in the sequential order.
