Abstract (en)

[origin: WO2022006309A1] Some embodiments of the methods and compositions provided herein include preparing modified B cells. In some embodiments, an endogenous beta-2 microglobulin (B2M) gene in a B cell is modified. Some embodiments relate to increasing the resistance of modified B cells to killing by allogeneic immune cells. In some embodiments, the endogenous B2M gene is inactivated increasing the resistance of the modified B cell to killing by allogeneic immune cells. In some embodiments, a replacement MHC-I is inserted into an inactivated endogenous B2M gene increasing the resistance of the modified B cell to killing by allogeneic immune cells. Some embodiments include enriching for successfully modified cells.
