Abstract (en)
[origin: WO2022002895A1] The invention relates to a filter plate, comprising a central working surface (1) and a plate frame (2) which frames the working surface (1) in the manner of a rim and which has a greater material thickness than the working surface (1), such that the plate frame (2) protrudes perpendicularly from the plane of the working surface (1) at least on one side, wherein the central working surface (1) and/or the plate frame (2) and/or assemblies or add-on parts installed in the working surface (1) or in the plate frame (2) have at least two regions with different material filling density of an identical material.
