Abstract (en)

[origin: WO2022002431A1] The invention relates to a transmission with a housing which has a lower part, a cover part, in particular a cover part which is placed on the lower part, an output shaft, and an input shaft. The lower part has a first support, a second support, a base, and lateral walls, wherein each of the lateral walls is connected to the first support and to the second support, in particular in a welded manner, the first support is a closed ring structure, in particular a closed ring, the second support is an open ring structure, in particular an open ring, a first bearing, in particular a double bearing, for rotatably supporting the output shaft is received in the base, a second bearing for rotatably supporting the output shaft is received in the bearing receiving part, the base is connected to the second support, in particular in a welded manner, and the base is connected to the bearing receiving part, in particular in a welded manner.
