Abstract (en)  
[origin: WO2022003080A1] A pyrotechnic circuit breaker comprising: - a housing (10), - at least two connection terminals (21, 22), - an internal electrical circuit connecting the two connection terminals (21, 22) and formed for example by an electrical conductor, - an opening member (40) which is movable and designed to open a part to be opened of the internal electrical circuit during a movement between an initial position and a final position, so as to form at least two separate conductor portions (32, 33) after opening, - a pyrotechnic actuator designed to move the opening member (40) from the initial position to the final position, - an internal chamber defined by an internal wall formed in the housing (10), and receiving the part to be opened, - an insulating grease (70) arranged in the internal chamber, characterized in that the insulating grease (70) is arranged on or covers at least two predetermined parts of the internal wall.
