Abstract (en)
[origin: CN116098512A] The invention relates to a suction head (5) comprising a head body (6) provided with a suction opening (8), and a connector (9) configured to be mechanically and fluidly connected to a suction tube (15) of a vacuum cleaner. The head body (6) is mounted so as to be pivotable about a vertical pivot axis (A2) with respect to the connecting piece (9) and is configured so as to assume a main operating position, in which the head body (6) extends substantially perpendicular to the suction tube (15), and a pivoted position, in which the head body (6) extends substantially parallel to the suction tube (15), with respect to the connecting piece (9). The suction head (5) comprises an electric drive mechanism (17) configured to pivot the head body (6) about a pivot axis (A2).
