Abstract (en)  
The present application discloses a slide rail assembly and a shower room. The slide rail assembly includes: a slide rail provided with a sliding chute having an upwardly opened notch and a stopper; a pulley device including a pulley and a mounting seat, the pulley being rotatably mounted on the mounting seat, and the pulley being hung over the sliding chute and movable along the sliding chute; and a limiter fixed on the mounting seat. The limiter is provided with a limiting portion, which is located below the stopper. The stopper prevents the pulley from upwardly moving out of the sliding chute by limiting the upward movement of the limiting portion. The pulley may not upwardly move out of the sliding chute during the movement along the sliding chute, so that the slide rail assembly is applied to a shower room without the problem that a glass door falls and breaks, and the shower room is safer when in use.
