Abstract (en)
[origin: EP4177554A1] This invention helps to prevent any deformation of the walls of the board casing (2) by increasing the strength of the board casing (2) during the filling of the insulation material, thanks to the temporary protrusions (5) extending from the base (3) of the board casing (2) and after the insulation material is filled, the protrusions (5) are broken and removed from the board casing (2), allowing the desired electronic card to be easily placed inside the board casing (2), regardless of the dimensions of the electronic card to be placed in the board casing (2).
