Abstract (en)

[origin: WO2022008347A1] An aerosol generation device (2) is provided, the device comprising: at least one sensor (16) configured to measure at least two behavioural modes; a memory (18) configured to store the measured behavioural modes; and verification control circuitry (20) configured to process and verify the measured behavioural modes by separating the measured data, combining the separated data into a verification dataset, and unlocking the aerosol generation device (2) cigarette for use following successful authentication.
