Abstract (en)
[origin: WO2022008161A1] The invention relates to a truss-type rail for an amusement ride, comprising two rail tubes which are directly trafficable by a roller coaster train; a non-trafficable truss chord tube; and vertical truss profiles, which reinforcingly connect the rail tubes and the truss chord tube and comprise vertically diagonal profiles alternately ascending and descending diagonally between the truss chord tubes and the rail tubes. According to the invention, in at least one connection region of the vertically diagonal profiles there are no additional vertical truss profiles connected to the truss chord tube.
