Abstract (en)
[origin: WO2022009119A1] The present invention is an abrasive composite including a first crosslinkable binder component, wherein when polymerized, has a glass transition temperature (T_g) below room temperature and a modulus of less than about 150 MPa; a second crosslinkable binder component having a T_g above room temperature; a material capable of initiating addition polymerization; and particulate grains having a Mohs hardness value of less than or equal to about 3.
