Abstract (en)

[origin: WO2022008269A1] The invention relates to a device and a method for handling flexible hygiene products (10), in particular sanitary pads, wherein the hygiene products (10) are transported continuously along a transport path (11) and in the process are rotated, in particular placed upright. According to the invention, the hygiene products (10) are rotated by means of a rotating device (18) arranged in the transport path (11), wherein a conveyor means (21, 22) for the hygiene products (10) is arranged preferably directly upstream and downstream of the rotating device (18), and the rotating device (18) has a shorter dimension than the hygiene products (10) in the transport direction (12) of the hygiene products (10) along the transport path (11) such that each hygiene product (10) is transported by at least one of the two conveyor means (21, 22) while being rotated by the rotating device (18).
