Abstract (en)  
[origin: WO2022008070A1] Embodiments of the present disclosure provide a method, a computer program product, and a device (100) for obtaining user input to an application in a portable device (100) comprising a touch detection area (102) and one or more movement determining sensors (104). The method comprises detecting (S11) first user input on the touch detection area (102) within a time period, wherein the first user input is related to the application. The method further comprises registering (S12) movement of the portable device within a predetermined space during said time period and causing (S14) the application to respond to second user input during said time period, wherein the second user input is obtained from the registered movement.
