Abstract (en)
[origin: WO2022058153A1] Transfer of a software application from a first to a second data processing device by means of the following steps: – execution of a first instance of the software application in the first data processing device, wherein – data communication by the first instance of the software application with a further software application and/or an apparatus takes place, – internal state data of the first data processing device and/ or regarding an internal execution of the first instance of the software application are stored; – transfer of launch state data available in the first data processing device at a first time to a second memory device communicatively coupled to the second data processing device; – launch of a second instance of the software application, which is implemented in the second data processing device, at a second time by using the launch state data, in such a way that the first instance and the second instance of the software application are executed in sync at a subsequent third time; – handover of data communication with the further software application or apparatus from the first instance to the second instance of the software application.
