Abstract (en)

[origin: CA3182400A1] The invention relates to a method in a first security element for transmitting an electronic coin data set to a second security element, said electronic coin data set being registered in a coin register of a payment system. The method has the steps of: setting a status of the electronic coin data set from the security element to an inactive status; transmitting the electronic coin data set from the first security element to the second security element; checking whether a receipt confirmation from the second security element has been received in the first security element; and deleting the transmitted electronic coin data set if the checking step results in that the receipt confirmation has been obtained by the first security element. The invention additionally relates to a payment system, a coin register, a security element, and a terminal for transmitting electronic coin data sets. (Fig. 5)
