Abstract (en)

[origin: WO2022174943A1] The present invention deals with the technical field of providing information to patients, for example prior to the performance of a medical treatment, and the electronic documentation of the provision of information. The subjects of the present invention are a computer system and a computer program product that make it possible to issue information to a patient in the form of selected information units and to detect and to document the selection and the behaviour of the patient when the information units are issued in order to issue them to a doctor at a later time so that said doctor is able to use this information for a needs-oriented discussion with the patient ahead of the medical treatment.
