Abstract (en)

[origin: WO2022043372A1] The invention relates to a cable connection comprising an electrical conductor surrounded by an insulating sheath (2a, 10a, 12a), e.g. made of silicone or PVC, which conductor is left exposed at a free end (2b), a contact part such as a terminal (4), a plug or the like which is connected to the conductor at this free end (2b), the contact part comprising a connecting portion designed for connection to the free end of the conductor, and a shrink-fit sleeve (8, 18) that surrounds the connecting portion and the free end so as to form a seal, in particular against moisture. For reliable sealing of lines having a less adherent sheath, in particular a silicone sheath, according to the invention a metal ring (6, 14, 16) is pressed on the conductor in the vicinity of the connecting portion.
