Abstract (en)

[origin: EP4180610A1] The fixing anchor (1) for position-adapted mounting of the filling (2) of the facade aperture (32) to the facade aperture (32) of the prefabricated panel (33) or the monolithic reinforced concrete construction. The fixing anchor (1) consists of the clamping segment intended for firm connection with the mass of the prefabricated panel (33) or the monolithic reinforced concrete construction and of the mounting segment intended for firm or dismountable connection with the filling (2) of the facade aperture (32). The mounting segment is adjusted for the dismountable connection with the clamping segment with a possibility to set up mutual position of the mounting segment against the clamping segment and thus also setting of the mutual position of the filling (2) of the facade aperture (32) against the facade aperture (32). The clamping segment is a clamping bush (3) which is adapted for integration into the prefabricated panel (33) or the monolithic reinforced concrete construction. The mounting segment is formed by the bearing link (7) and the adjustable draw rod (8).
