Abstract (en)

[origin: WO2022013546A1] The present invention relates to an article for use in an aerosol provision system. The article is a consumable for insertion into an aerosol provision device. The aerosol provision device comprises a heating assembly having a wall that at least partially defines a chamber for receiving said consumable for heating during use of the device, where heating the consumable causes deposits of condensate to form on said wall. The consumable comprises a first section of aerosol generating material and a second section of absorbent material. The absorbent material is exposed at least partially along a length of said consumable for direct contact with said wall of said chamber to absorb said deposits when the consumable is received in the chamber. The present invention also relates to an article for cleaning an aerosol provision device and a method thereof.
