Abstract (en)
[origin: WO2022012965A1] The invention relates to a pole handle (1), in particular for a ski pole, cross-country ski pole, trekking pole, or Nordic walking pole, comprising a central receiving area (11) that at least partly receives a loop fastening element (5) with a hand loop (4), which is secured to the loop fastening element (5) and has an adjustable size. The invention is characterized in that the loop fastening element and the hand loop (4) secured to the loop fastening element (5) form a modular unit which is formed separately from a core (1a) of the pole handle (1) and which is secured to the core (1a) of the pole handle (1) in a reversibly tiltable manner about a rotational axis (D) in the pole handle (1), wherein the loop fastening element (5) can be tilted from a rest position (X1), in which the loop fastening element (5) is integrated into the surface contour of the handle head and in which the size of the hand loop (4) cannot be adjusted, upwards about the rotational axis (D) into an adjustment position (X2), in which the size of the hand loop (4) can be adjusted.
