Abstract (en)

[origin: WO2022013770A1] The invention relates to a device for the physical relaxation of a person. The device comprises at least one contact surface (11), on which at least parts of the person come into physical contact with the device. The device additionally comprises at least one relaxation means for generating and/or blocking stimuli in order to relax the person and at least one lighting means (13), which is designed to emit optical radiation in a wavelength range between 200 nm and 230 nm and supply a radiation region with optical radiation with a peak ranging between 207 and 222 nm. The invention also relates to the use of a lighting means for the aforementioned purpose and to a method for disinfecting a device for the physical relaxation of a person.
