Abstract (en)

[origin: WO2021151127A1] The invention relates to a device for applying a load to an exercise equipment (1) comprising driving means (2), control means (3) adapted to control the driving means (2), attachment means (4) adapted to attach the device to the exercise equipment (1), and connection means (5) connecting the driving means (2) to the attachment means (4), wherein the device comprises a load sensor (6), wherein the load sensor (6) is adapted to measure the load applied to the exercise equipment (1) by the driving means (2), and wherein the load sensor (6) is connected to the control means (3). The invention further relates to a system and a method.
