Abstract (en)

[origin: WO2022013199A1] The invention relates to a separation device (10) comprising at least one inlet (11) for a contaminated fluid, in particular waste water containing fat, and a receiving element (12) having at least one first chamber (13) for receiving the contaminated fluid and at least one second chamber (14) for receiving the cleaned fluid, wherein the inlet (11) feeds into the first chamber (13) and the first chamber (13) is fluidically connected to the second chamber (14) for transferring the cleaned fluid, wherein the two chambers (13, 14) are separated from one another by at least one separating wall (15), which is integrally formed with the receiving element (12). The invention also relates to a production method.
