Abstract (en)  
[origin: WO2022012785A1] The invention relates to a hand-held power tool (12), in particular a hammer drill, comprising a tool holder (16), a striking mechanism (32) and a rotary drive (34), wherein the hand-held power tool (12) is designed to rotate a tool (18) accommodated in the tool holder (16) about a longitudinal axis (L) of the tool (18) at a rotational speed  $n$  and to drive same along the longitudinal axis (L) with a striking movement at a stroke frequency  $f$ , wherein the striking mechanism (32) is designed as a direct electromechanical, electro-pneumatic or electromagnetic striking mechanism. The hand-held power tool is characterised in that the ratio of the rotational speed  $n$  to the striking frequency  $f$ , at least at a working point of the hand-held power tool (12), is max. 5.0 U/Min./Hz, or, at least at the working point of the hand-held power tool (12), the rotational speed  $n$  is max.  $(0,2 \cdot (f/\text{Hz}-22)^2+80)$  U/Min according to the striking frequency  $f$ , in particular for striking frequencies  $f$  in the region of 20 to 60 Hz. The invention also relates to a tool (18) and a hand-held tool system (10). It allows for a particularly effective and efficient processing of e.g. rocks.
