Abstract (en)

[origin: WO2021260020A1] Disclosed is an electrochemical device for the electrochemical treatment of effluents comprising at least one electrolyzing vane, wherein the at least one electrolyzing vane comprises two electrodes separated by a spacer having a thickness of between 1 and 1000 µm, preferably between 20 and 800 µm, more preferably between 50 and 500 µm, wherein the at least one electrolyzing vane is movably mounted on a supporting unit.
