Abstract (en)
[origin: CA3185723A1] The device (100) for hybrid production of synthetic dihydrogen and/or synthetic methane comprises: - an inlet (105) for a synthesis gas stream preferably comprising at least CO and H₂, - a catalytic conversion reactor (110), the following alternative configurations: - a first configuration in which the operating conditions of the reactor promote a Sabatier reaction, so as to produce an outlet gas comprising mainly methane, or - a second configuration in which the operating conditions of the reactor promote a reaction of the gas with water, so as to produce an outlet gas comprising mainly dihydrogen; - an outlet (115) for synthetic dihydrogen and/or synthetic methane and - a control system (120) comprising a means (121) for selecting a configuration for operating the reactor and a control means (122) according to the selected configuration, the reactor being configured to operate according to a command.
