Abstract (en)
[origin: WO2022011412A1] A slab track adjustment device is described including: a rail support portion for supporting a rail; at least two height adjustment apertures for receiving height adjustment spindles to adjust the effective vertical position of the rail support portion; a lateral adjustment means to adjust the horizontal position of the rail support portion; and wherein the rail support portion is engageable with the foot of the rail so that the adjustment device can hang from the foot of the rail during the process of installing the adjustment device.
