Abstract (en)

[origin: CA3210329A1] The invention relates to a method for cleaning the interior of pipes (12) using a cleaning device (1) and to a cleaning device (1). The cleaning device (1) has a tube (47) and an advancing unit (21) for moving the tube (47) along a main axis (H) of the advancing unit (21). The advancing unit (21) has a drive (94) which is frictionally connected to the tube (47) and by means of which the tube (47) is moved in an axial direction along the main axis (H). The advancing unit (21) rotates about the main axis (H) during the axial movement of the tube (47), and the drive (94) transmits the rotational movement to the tube (47).
