Abstract (en)

[origin: WO2022013044A1] The invention relates to a device (100) for assisting in the intensive-care treatment of a patient (1) for stationary use at the hospital bed (3) of an intensive care unit, said device comprising at least two different functional components (111, 112, 113) for providing different functions for inputting and/or outputting information relating to the treatment, an input component (120) for at least one input by a user (2), and a dialogue component (130) for dialogue-based interaction with the user (2) based on the input, in order to use at least one of the provided functions, wherein at least one of the functions is designed for filtering and outputting laboratory results of the patient (1).
