Abstract (en)

[origin: WO2022018047A1] Disclosed is a method for generating a graphic indicator (GEN\_AVATAR) of compliance with a treatment, the method comprising the following steps: # Identification of a user, # Activation of a first program (PRG1) causing the activation of a chronometer (ACT\_CHR) and the generation of a time marker (Mi); # Generation of a first score (XP1) recording the generation of the time marker (Mi) that was generated and a set of the time markers ({Mij}i[1; i-1]) that were previously generated; # Activation of a second program (PRG2) collecting a set of interactions from a user on a digital interface (INT2) in order to generate a second score (CR2); # Activation of an accessibility to a set of first zones when the first score (XP1) is greater than a first threshold of number of days (S1); # Activation of an accessibility to a set of second zones when the second score (CR2) is greater than a value (V1), # Generation of a digital avatar (GEN\_AVATAR) defining an indicator of compliance with the treatment.
