Abstract (en)

The manufacturing device for a reconstituted tobacco sheet comprises a die that discharges reconstituted tobacco raw material and an extruder that press-feeds the reconstituted tobacco raw material to the die by rotation of a screw that is rotatably disposed inside the extruder. The die includes a housing, a feed port that is formed in the housing and to which the reconstituted tobacco raw material is fed, and a discharge port that is formed in one side face of the housing and from which the reconstituted tobacco raw material is discharged.
