Abstract (en)

[origin: WO2022018426A1] Apparatus for preparing a data-transmission cable that comprises a metallic conductor (6) to enable the conductor (6) to be replaced with optical fibre, the conductor (6) being centralised within a tubular passage (7) of a polymer dielectric (4) by a series of spaced integrally formed partitions (5), wherein the apparatus comprises a cutter (11) insertable into the tubular passage (7), the cutter (11) including cutting elements (14) that cut away the spaced partitions (5) of the dielectric (4) as the cutter (11) travels along the tubular passage (7).
