Abstract (en)

The supporting bracket and the system for fixing of façade structures, according to the invention, are applicable in the field of construction during the building of ventilated façades. The supporting bracket includes a metalmade base (1) for fixing of the supporting bracket to a building structure (9), at least one intermediate detail (2) and at least one end detail (3) for fixing to a supporting profile (8) of a façade substructure. The at least one intermediate detail (2) and the at least one end detail (3) are made of metals with different thermal conductivity, so as to decrease the thermal bridge between them. For example, the intermediate detail (2) is made of steel and the end detail (3) is made of aluminum.
