Abstract (en)

The system for fixing of thin cladding panels, according to the invention, is applicable in the field of construction, during the building of façade constructions, for example by the use of ceramic cladding panels with a thickness of at least 6 mm. The system includes a cladding panel (1), connected by fasteners to a support profile (2), which is fastened to a façade subconstruction. On the side of the cladding panel (1), facing the facade subconstruction, rectilinearly undercut slots (3) are locally provided, which are inclined at between 35° and 55°, in opposite directions to each other, relative to the surface of the cladding panel (1), on the side where the slots (3) are made, into which holding parts (5) of fixing details (4) are inserted, connected in their other end by fastening parts (6) to the support profile (2).
