Abstract (en)

The invention relates to a fume extraction device (100) with a channel unit (200) for guiding fumes in a flow direction (S), wherein the channel unit (200) is configured for connection with a mounting wall (310) and comprises at least one first channel element (210) and at least one second channel element (220), wherein the at least one first channel element (210) and the at least one second channel element (220) are in connection with each other via at least one intermediate channel element (230), wherein for adjusting a variable length (L) of the channel unit (200) the at least one first channel element (210) and/or the at least one second channel element (220), and the at least one intermediate channel element (230) are configured and/or arranged to be moveable at least partially relative to each other, preferably in the flow direction (S). The present invention relates further to a combination apparatus (500) with a hob (400) and a fume extraction device (100). The present invention relates further to a kitchen cabinet (300) with a combination apparatus (500) and to a method for installation of a combination apparatus (500) in a kitchen cabinet (300).
