Abstract (en)

[origin: WO2022023429A1] A vaporisation component (1000) of a vapour generation device is provided. The vaporisation component comprises an evaporator component (1002) configured to generate a vapour flow by vaporising a vaporisable substance. The evaporator component has a first surface (1004) over which air flows in an airflow channel (128) of a vapour generation device in a direction toward a mouthpiece (120). The first surface comprises a plurality of recessed portions (1050) configured to interfere with an airflow (1018) in the airflow channel and affect a distribution of droplets in the generated vapour flow.
