Abstract (en)  
[origin: WO2022023463A1] The present invention relates to a multi-layer oral pharmaceutical composition comprising a matrix core, comprising a decongestant and a combination of at least two cellulose derivatives, a first layer comprising a cellulose derivative and an optional second layer comprising bilastine. The present invention provides an oral dosage form comprising a decongestant drug and bilastine with a reproducible profile characterized by a controlled release of the decongestant over a period in excess of twelve hours and preferably at least 16 hours and an immediate release of bilastine after oral administration. The invention further contemplates medical uses thereof.
