Abstract (en)

[origin: CA3188154A1] The invention relates to a fluid reservoir (11) for a spray gun (1), which fluid reservoir has a material outlet which is configured for the direct and/or indirect connection to a spray gun (1), wherein the fluid reservoir has a ventilation device (16), via which air can flow into the fluid reservoir (11) in order to ensure a pressure compensation when coating material flows out from the fluid reservoir (11) via the material outlet. Advantageously, the ventilation device (16) comprises a device on the outside of the fluid reservoir (11) and separately to a ventilation opening (61) and a latching device, which device cooperates as a centering device, a retaining device and/or a guide device with the closure element (51).
