Abstract (en)

[origin: WO2022023012A1] The invention relates to a cooling module for an electric or hybrid vehicle, said cooling module (22) having a housing (24) comprising an air inlet (24a) and an air outlet (24b) and within which there are arranged an assembly (23) of heat exchangers (25a, 25b, 25c) and a tangential turbomachine (28) configured so as to generate an air flow (F) passing through said housing (24) from its air inlet (24a) to its air outlet (24b) and passing through the assembly (23) of heat exchangers (25a, 25b, 25c), characterized in that the housing (24) has, on one of its outer lateral faces, a two-fluid heat exchanger (27) in order to allow the exchanges of heat energy between a first heat-transfer fluid circulating in a first circulation loop (C1) and a second heat-transfer fluid circulating in a second circulation loop (C2).
