Abstract (en)

[origin: WO2022023307A1] The invention relates to a system (1) for mounting an acoustic shield above a motor vehicle engine, said system comprising a shank (2) having a head (3) and a block (5) of moulded elastomer provided with a housing (6) into which said head can be inserted, said housing having a nominal size that allows it to accept, as a close fit, a head (3) of analogous nominal size, the wall (8) of said housing having at least one break in continuity (9) configured as a bellows so that, through deformation of said wall in the region of said break in continuity, the size of said housing can be enlarged to allow it to accept a head (3) of size greater than said nominal size.
